*per 100,000 population

Data Notes

- All cancer data are for American Indian or Alaska Native (AI/AN alone or in combination with another race) residents of Washington, diagnosed from 2001-2005
- Counts (n) and proportions (%) include all reportable cancer sites and stages
- Incidence rates are reported as number of cases per 100,000 population per year, with 95% confidence intervals (CI). In general, if 95% CIs for two rates do not overlap, they are said to be significantly different. All rates are age-adjusted to the 2000 U.S. standard population (19 age groups), and include invasive cases plus in situ urinary bladder.
- Blood cancers include leukemia, Hodgkin lymphoma, non-Hodgkin lymphoma, and multiple myeloma
- Data are from Washington State Cancer Registry; compiled by Northwest Tribal Registry Project and Northwest Tribal Cancer Control Project, NPAIHB

Stage at diagnosis, screenable cancers, 2001-2005

Note: In situ and localized may be referred to as 'early stage'; regional and distant are often considered 'late stage'

Racial Misclassification

Cancer estimates for AI/AN may be obscured when AI/AN are incorrectly classified as another race (usually White) in public data sources. Each year the NW Tribal Registry partners with the three northwest state cancer registries to correct AI/AN racial misclassification and improve cancer estimates for Northwest AI/AN. Please contact us if you are interested in additional cancer data for your community.

Cancer screening measures: Portland Area IHS (Idaho, Oregon, & Washington, 2008 reporting year)

56% of women ages 21-64 had a pap smear in the past 3 years	All IHS: 59% 2010 Goal: 90%
40% of women ages 52-64 had a mammogram in the past 2 years	All IHS: 45% 2010 Goal: 70%
35% of patients ages 51-80 had colorectal cancer screening in the past year	All IHS: 29% 2010 Goal: 50%
31% of tobacco users received tobacco cessation counseling in the past year	All IHS: 21% 2010 Goal: not determined
