

# CANCER PREVENTION

## For Our Children

Every year American Indian people get the following Human Papillomavirus (HPV) cancers that could be prevented by the HPV vaccine:

Cervical

Oropharyngeal

Anal

Penile

Vaginal

Vulvar

Age 9-14 is the most effective time to get the HPV vaccine to protect your child from cancer.

### It's Safe!

More than 57 million of the doses have been given, with zero safety concerns.

### It's Free!

Vaccines are available at no cost for ALL American Indian Children at any clinic.

### It's Important!

American Indians are more likely to get and die from cancer than the general population.

### It Works!

The vaccine prevents 90% of the cancer causing viruses.

Talk to your friends, your family and your community about how to protect your children from cancer with the HPV vaccine.

Talk to your doctor about the HPV Vaccine. Be confident in your choice to vaccinate your child.
